

Sales Performance & Revenue Analytics Dashboard

Industry: Retail / FMCG / E-commerce **Tool:** Microsoft Excel

Business Objective

Build a management dashboard that consolidates sales transactions into actionable KPIs for revenue, profitability, target achievement, regional performance, product performance and salesperson productivity.

Data & Methodology

The workbook contains 6,000 realistic sales transactions covering January 2025 through August 2026. The workflow follows raw data, cleaning, calculated KPIs, target planning, analysis and dashboard visualization.

Key KPIs

KPI	Purpose
Total Sales	Measure gross revenue generated
Total Profit	Measure contribution after cost
Profit Margin	Assess profitability relative to sales
Orders	Monitor transaction volume
Units Sold	Monitor product volume
Average Order Value	Measure average revenue per order
Target Achievement	Compare actual sales against plan

Business Analysis

- Monthly sales versus target trend analysis.
- Regional sales, profit and margin comparison.
- Category and product mix analysis.
- Salesperson productivity and contribution analysis.
- Identification of target gaps and margin leakage caused by discounting.
- Interactive dashboard filtering through Excel dropdown controls and structured analytical tables.

Portfolio / Resume Value

This project demonstrates practical Business Analyst capabilities in Excel data preparation, KPI design, business analysis, management reporting, dashboard development and data-driven decision support.
